Data Retention & Deletion Policy

Effective date: 24 February 2026

1. Purpose

This policy describes how SVA retains and deletes member information collected through Discord, applications, training, and flight logging.

2. Active Members

Personal data and operational records are retained while a member remains active in SVA, to provide training and flight logging services.

3. Deletion on Departure

If a member leaves or is removed, SVA can delete their information using `/purgeuserflights`, which removes flights and associated personal details from the database.

No automated database backups are maintained.

4. Training Revocation

If qualification roles are manually removed, this is treated as an override and recorded in the training database as revoked/needs retraining.

5. Review

This policy will be reviewed if data collection, storage, or backup practices change. Version v1.7.
